

ABANAKI

ChillyBits™

The ChillyBits air chiller uses compressed air to produce cold air to directly cool bits and tooling during machining operations.

Using ChillyBits eliminates mist cooling, extends tool life, speeds up machining time, and eliminates heat related parts growth. In some cases, ChillyBits can allow for the complete elimination of coolant and all of the cost and problems associated with it.

The only thing that powers ChillyBits is standard compressed air. It uses no Freon and no electricity.

The ChillyBits has no moving parts long lasting life. The unit comes with a magnetic base for easy mounting and an airline dryer.

- Eliminates Mist Cooling
- Uses No Freon
- Magnetic Base for Easy Mounting
- Extends Tool Life
- Adjustable Tip for Precision Tooling
